ABOUT

Backend Python Developer specializing in FastAPI and Django with hands-on experience building scalable REST APIs, authentication systems, and asynchronous services.

Developed production-ready projects including an e-commerce backend platform and AI-powered Telegram bot. Strong focus on clean architecture, security practices, and performance optimization.

EXPERIENCE

Freelance / Self-Employed – backend developer

2024 – present

Developed backend services and APIs for small projects and clients. Worked with databases, authentication, and basic security practices. Fixed bugs, improved performance, and optimized server logic. Communicated with clients to understand requirements and deliver solutions.

EDUCATIONS

International Digital University (IDU), Tashkent – Bachelor's Degree in Information Technology (Cybersecurity)

2025 – Present

Studying programming and computational mathematics.

Learning cybersecurity fundamentals and computer science basics.

Professional English for IT and technical communication.

Japanese language for academic and professional use.

SKILLS

Backend:

Python, C++ Django, Django Rest, FastAPI, Flask, Pydantic, Aiogram, SQLAlchemy,

Frontend (Basic):

HTML, CSS, JavaScript, React, Next.js

Databases:

PostgreSQL, Redis, RabbitMQ

DevOps:

Docker, NGINX, Linux.

Tools:

Git, Github, Celery

LANGUAGES

English – B2

Russian – B2

Uzbek – Native

Japanese – N5

CERTIFICATES & DIPLOMS

<https://akrom-omega.vercel.app/certificates>

COURSES

Najot Ta'lim, Tashkent – Backend Development (Python, Django)

2023 – 2024

Learned backend development using Python and Django.

Built REST APIs and worked with databases.

Implemented authentication and basic security practices.

Developed and tested backend projects as part of the training program.

TECHNICAL HIGHLIGHTS

- REST API design and development
- JWT authentication and role-based access control
- Asynchronous programming (FastAPI, Aiogram)
- Database design and optimization (PostgreSQL)
- Background tasks and message queues (celery, Rabbitmq, Redis)
- Docker containerization and Linux deployment
- Secure backend architecture principles

TECHNICAL HIGHLIGHTS

- Active GitHub contributor with multiple public projects
- Building open-source backend and automation tools
- Maintaining personal portfolio and projects documentation

PROJECTS

Marketplace – E-Commerce Backend Platform

<https://github.com/RustamovAkrom/Marketplace-FastAPI>

- Developed a scalable REST API backend for an e-commerce marketplace using **FastAPI, SQLAlchemy, and PostgreSQL**
- Implemented **JWT authentication and role-based access control (RBAC)** for secure multi-role user management
- Designed and built core business modules including **product catalog, shopping cart, order processing, and user management**
- Applied clean architecture principles and modular project structure to ensure **maintainability and scalability**
- Optimized database interactions and API performance for production-ready usage

DeepSeek Telegram Bot

https://github.com/RustamovAkrom/DeepSeek_TelegramBot

- Built an AI-powered Telegram bot using **Aiogram 3** and **DeepSeek API** for real-time conversational interactions
- Designed a modular architecture supporting **per-user settings, model switching, and conversation history management**
- Integrated asynchronous backend services with **SQLAlchemy** for efficient data handling and user configuration storage
- Implemented non-blocking async workflows to improve responsiveness and user experience

Viberfy – Music Web App (Full Stack)

<https://github.com/RustamovAkrom/Viberfy>

- Developed a full-stack music streaming web application using **Django (backend)** and **Next.js (frontend)**
- Built secure REST APIs with **JWT-based authentication** and role-based access for content management
- Implemented **asynchronous background tasks** for media processing and optimized backend services for performance
- Created responsive UI and integrated frontend with backend APIs for seamless track browsing and playback
